cost-effective. Start building yours now.

Desktop apps: Video conferencing platform is considered incomplete without its desktop version. Build your video conferencing solution for desktop users for macOS and Windows OS. Building a desktop app for videotelephony technology is as simple as ordering a pizza. Don't believe us? Let's give it a try and build your desktop apps for macOS and Windows.

Web apps: Web is the place where your users have their first interaction with your digital product. Web apps work for all and on all devices having a web browser. So, what are you waiting for? Start building your web apps for video conferencing solutions.

What features should your video conferencing platform have?

While most video conferencing platforms share common basic features, you should spend time researching to find out what you can add in, to make your app stand apart from the crowd.

new meeting. Lets your users start a new meeting instantly, just by signing up.

Join meeting: Lets you join a meeting via a web link, a meeting ID, or invite code.

Chat: This feature allows you to chat with other members during a meeting.

Meeting lists: You can browse a list of upcoming meetings in your dashboard. It's an essential feature for remote workers who have regular meetings.

Contacts: It's an essential feature as it allows you to add, edit and manage your contacts. You can use this contact list to send meeting reminders.

Mute / Unmute: You can't imagine a videotelephony platform without being able to mute and unmute. A host can mute participants or they can decide if they want to be heard.

Start / Stop video: Essential for user privacy. Makes it optional whether participants want to appear on the camera or not.

Manage participants: It's again an essential feature for the host. It allows a host to manage participants effectively.

Share screen: You can't imagine a virtual conferencing solution without a screen share feature. One of the most important features for any video conferencing platform.

Record meeting: Lets your users record the meeting and share it with others. Recording a meeting and storing it in the cloud.

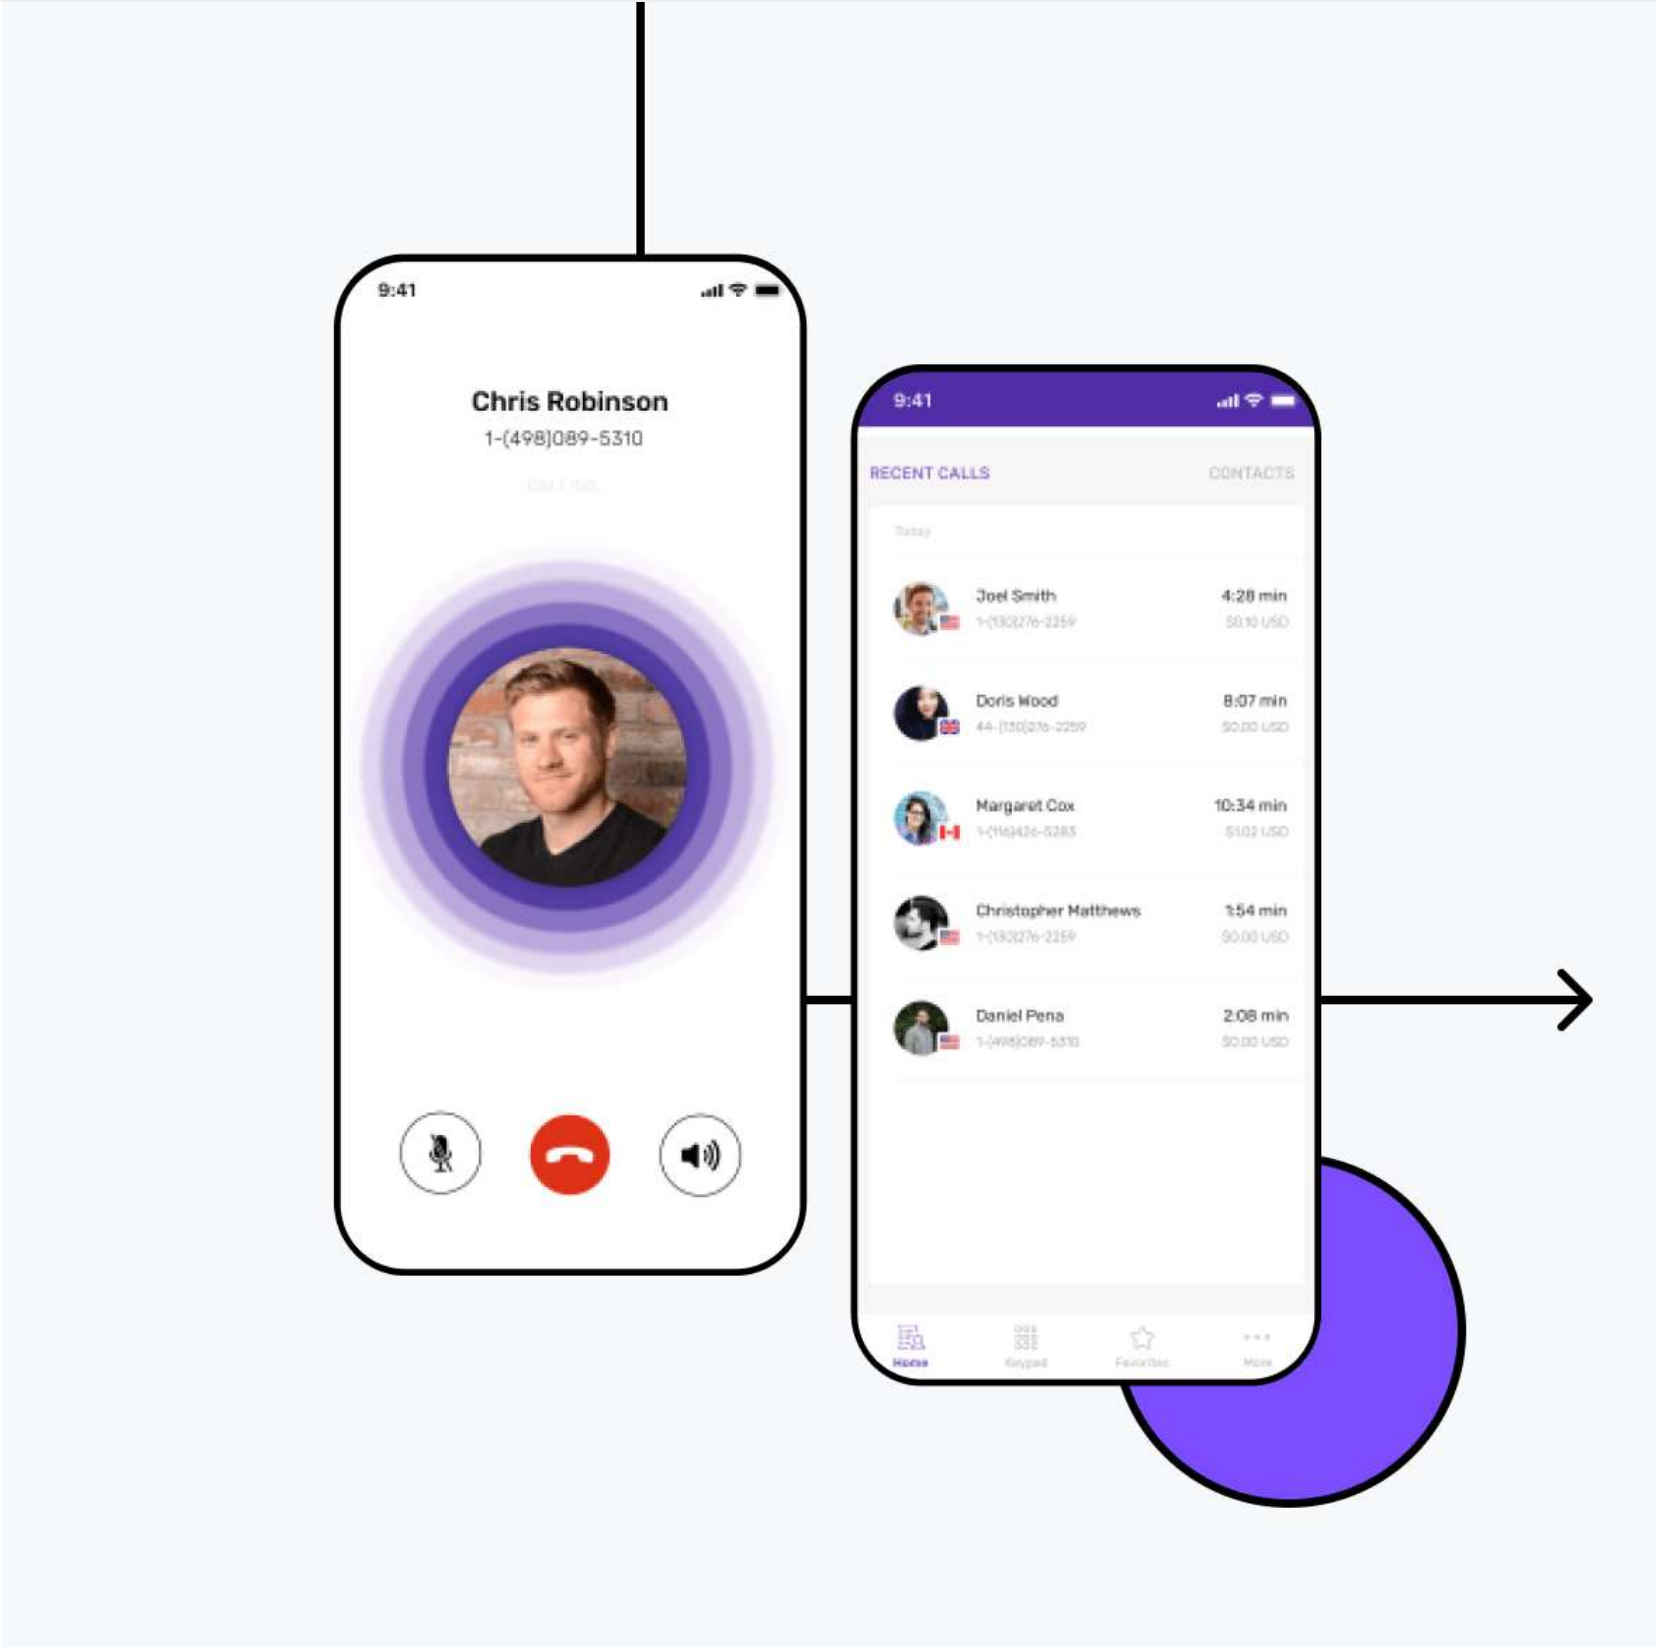

Invite: Hosts can invite people through an email, a web link, a meeting ID or a meeting code.

5 Steps to build your video conferencing application

1. **Decide on your type of software:** What kind of video conferencing software do you want to build

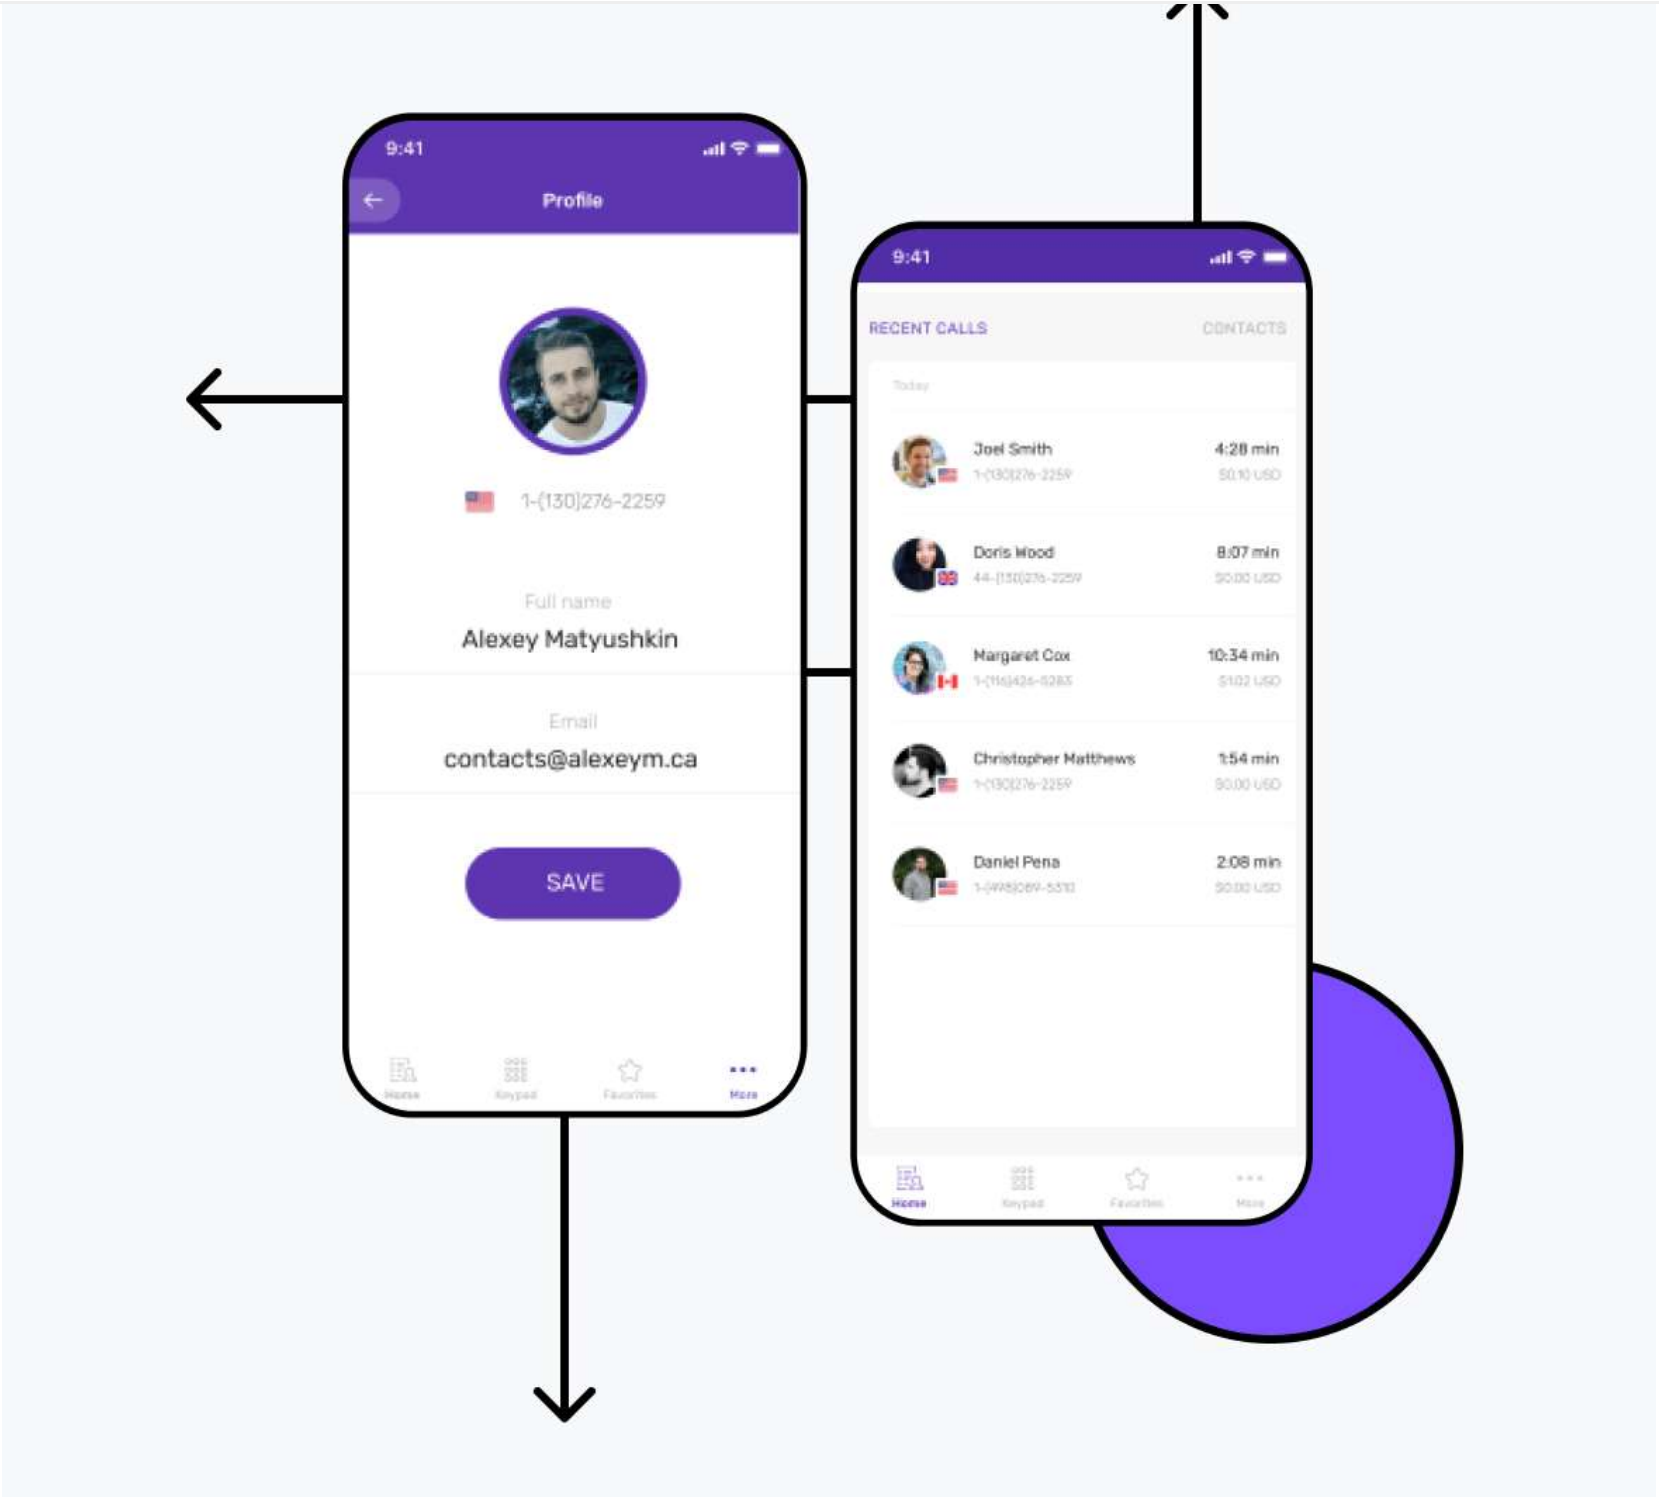

By using this website you agree to our cookie policy **Accept** sktop app, a web app, or something else – you can select

3. **Select the features you want:** Go with the auto-suggestion from our AI-powered library of features, or add any custom ones you want in your application.
4. **Select the launch platform:** Do you want to go with iOS, Android, Desktop OS (Windows or Mac) or web?
5. **Select your team and delivery time:** Choose the team from the global time zone you prefer and delivery time (how quickly you want your app developed).
6. **Launch the app:** You're ready to launch your apps. We'll help you prepare for a successful launch.
